

Welcome to the Journal of carcinogenesis. Our journal is very broad in its scope and reflects our vision to bring to our readers the newest and the most comprehensive original research articles and insightful reviews, related to carcinogenesis and related disciplines. As a clinician scientist, I always have been interested in the translation of ideas and concepts to benefit the patients. Therefore, my role as a practicing oncologist is to solicit and publish as many translational research manuscripts as possible. With the new technologies and ideas that basic scientists provide us with, we have been experiencing a true revolution of modern oncology: from diagnosis to therapy, from prevention to palliation. Molecular topics overwhelm all of us and challenge the current paradigm of oncology. We, at the editorial board of the Journal of carcinogenesis, will ensure that all of us will better understand the new era and give basic, translational, and the clinical cancer research scientists the opportunity to keep the dialogue open and move the entire field of oncology forward.

Please do not hesitate to contact me or anyone on our board directly and submit your next manuscript to the Journal of Carcinogenesis. Please visit the journal web site (www.carcinogenesis.com) for instructions to the authors and other relevant details for submitting your next manuscript to the Journal of Carcinogenesis.

Sincerely,
Stefan Gluck
Co-Editor-in-Chief
